

How to Audit a Website in 30 Minutes?

The only **guide you
need**

Swipe

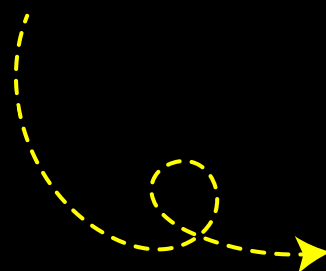

Why Website Audits Matter?

Regular audits help identify critical issues harming your traffic and rankings.

- Fix overlooked problems.
- Enhance technical, on-page, and user experience metrics.
- Improve search engine visibility and user retention.

Conduct a mini-audit monthly for optimal results.

How? Let's see

Swipe

1 Start with Crawling

Start by crawling your website to see what search engines see.

How?

- Use free tools like Screaming Frog or Sitebulb.
- It'll take 2-5 mins to crawl depending on the size of the website.

A screenshot of a web crawling tool interface. It features a search bar with a globe icon and the text 'domain.com'. To the right of the search bar are three buttons: 'Start', 'Clear', and 'Crawl'. The 'Start' button is highlighted with a green border.

Swipe

2 Page Indexing Check

Make sure all and only relevant pages are indexed by search engines.

What to check?

- Number of pages indexed (via GSC)
- Pages blocked by robots.txt or marked as noindex.
- Thin or duplicate content issues on indexed pages.

Tip –

Maintain a clean sitemap and keep irrelevant pages out of the index.

Swipe

3 Core Web Vitals Check

Measure key website performance metrics to improve user experience.

What to check?

- LCP: Less than 2.5 seconds for faster load times.
- CLS: Below 0.1 for visual stability.
- INP: Below 200ms for faster interactivity.

Tip –

Compress images and preload critical resources for better performance.

Swipe

4 Mobile Optimization Check

Google prioritizes mobile-first indexing, so mobile experience matters most.

What to check?

- Ensure your site is fully responsive and loads quickly on mobile devices.
- Buttons are easily tappable, and font sizes are legible.
- Avoid intrusive pop-ups.

Tip –

Page speed insights can help you optimize for faster speed on mobile devices as well.

Swipe

5

Meta and Heading Tags Check

Optimized on-page elements are critical for search visibility.

What to check?

- Titles: Under 60 characters, include primary keyword.
- Meta descriptions: 150–160 characters with a call-to-action.
- Headers: Proper hierarchy (H1 → H2 → H3) with keywords.

Tip –

Avoid keyword stuffing; keep your content user-focused.

Swipe

Content Audit

High-quality content drives engagement and rankings.

What to check?

- Outdated or irrelevant content that needs an update.
- Duplicate content across pages.
- Internal linking opportunities to connect related pages.

Tip –

Refresh older posts with updated stats and examples to boost rankings.

Swipe

7 Internal Linking Audit

Internal links guide users and search engines to key content.

What to check?

- Broken or redirected internal links.
- Overused anchor text on multiple pages.
- Linking to high-priority and relevant pages.

Tip –

Only use the relevant anchor text to link the pages.

Swipe

8 Backlink Profile Check

Ensure your backlinks are helping, not hurting your rankings.

What to check?

- Toxic links or spammy domains in your profile.
- Anchor text diversity and naturalness.
- Backlinks from authoritative and relevant domains.

Tip –

Use tools like Ahrefs or SEMrush to audit backlinks and disavow harmful ones.

Swipe

9 Technical SEO Quick Check

Fix critical technical issues that block search engine access.

What to check?

- Proper robots.txt file setup (block unwanted pages).
- Sitemap.xml updated with all important URLs.
- HTTP to HTTPS redirection properly implemented.
- Page load times are optimized for technical efficiency.

Tip –

Use tools like Screaming frog to find and fix the issues.

Swipe

10 Redirects & Canonicals

Poorly implemented redirects can confuse search engines and waste link equity.

What to check?

- Fix broken or outdated redirects (302 → 301 if permanent).
- Ensure no redirect chains or loops exist.
- Verify proper use of canonical tags for duplicate content.

Tip –

Always redirect old URLs to relevant pages, not the homepage.

Swipe

11 Schema Markup

Structured data helps search engines understand your content better.

What to check?

- Add schema types like FAQs, reviews, and product markup.
- Test your structured data with Google's Rich Results Tool.
- Fix invalid schema errors flagged by GSC.

Tip –

Implement schema only where relevant to avoid bloating your site's code.

Swipe

12 404 and Broken Links

Dead links harm user experience and SEO performance.

What to check?

- Identify broken links (internal and external) on the website.
- Create custom 404 pages with helpful navigation options.
- Fix or redirect broken links to relevant, live pages.

Tip –

Regularly scan for broken links using tools like Ahrefs or Screaming Frog.

Swipe

13 Sitemap and Robots.txt Check

Ensure search engines can easily discover and index your content with proper settings.

What to check?

- Verify sitemap.xml is present and up-to-date with all relevant pages.
- Ensure the sitemap is submitted in GSC and linked in robots.txt.
- Check that robots.txt file isn't blocking essential pages or sections.

Tip –

Regularly scan for broken links using tools like Ahrefs or Screaming Frog.

While this covers the major elements, a comprehensive audit goes beyond these checks.

Stay tuned for more advanced tips!

That's it 😊
