

Should You Disavow Those Links?

How to Decide
in 30 Seconds

Some SEOs will tell you with incredible confidence: “Oh sure, **you should disavow those 2,467 links!**”

Truth is, **they often operate on outdated assumptions about toxic links.**

Here's what actually matters ➡

 Samy Thuillier

Google has repeatedly stated they're good at ignoring bad links. As usual, that's not true.

After analyzing thousands of backlink profiles, I've found **3 specific scenarios where disavowing is still crucial for protection and recovery.**

Let's see them together 🙌

 Samy Thuillier

01

My 30-Second Framework

02

My 30-Second Framework

Answer these 3 questions to know if you should disavow:

1. Did you receive a manual action?

- **Yes** → **Disavow** immediately
- **No** → **Continue** to question 2

2. Seeing any of these red flags?

- 40%+ of links from the same C-class IP
- Sudden spike in referring domains
- 60+% exact match anchor text
 - **Yes** → **Disavow recommended**
 - **No** → **Continue** to question 3

3. Are you in a YMYL niche AND have previous penalty history?

- **Yes to both** → **Defensive disavow recommended**
- **No to either** → **Skip disavow**

03

Case Study 1: The False Alarm 🙄

Profile:

- E-commerce site with 50,000+ backlinks
- 20% exact match anchors
- No manual actions
- Steady 15% monthly growth in referring domains
- Diverse IP distribution

Analysis: Link velocity and anchor text distribution fall within natural patterns, healthy geographic diversity indicating organic growth.

→ **Decision: No disavow needed.**
Implementation of monthly monitoring system.

04

Case Study 2: The Clear Cut Case 🦷

Profile:

- Medical practice website
- 70% exact match anchors targeting treatment keywords
- Previous manual action in 2024
- YMYL niche with high competition
- 80% links from private blog networks

Analysis: Aggressive anchor text optimization + PBN usage in a YMYL niche creates a high-risk profile.

→ **Decision: Comprehensive disavow** including all PBN domains and over-optimized anchors.

05

Case Study 3: The Gray Area 🤖

Profile:

- SaaS company
- 45% links from same IP range
- No manual actions
- Non-YMYL niche
- Recent acquisition of competitor

Analysis: IP concentration raises concerns, but acquisition history explains pattern. Selective disavow approach maintains valuable links while reducing risk.

→ **Decision: Target disavow** of suspicious IP-related links while preserving acquisition-related backlinks.

06

Why This Matters to Your Bottom Line

Poor quality links can trigger Google penalties, causing:

- Sudden drops in website traffic
- Loss of keyword rankings
- Reduced online revenue
- Damage to brand reputation

→ Your 4-Step Protection Process:

1. **Data Review** - Monthly audit of your link profile using Google Search Console
2. **Risk Assessment** - Identification of potentially harmful links
3. **Clean-up Action** - Remove or disavow dangerous links
4. **Performance Monitoring** - Track your site's health and rankings

07

What You Need To Watch For

▶ Red Flags:

- Sudden traffic drops (>20%)
- Unusual spikes in incoming links
- Competitor penalty notifications
- Market sector spam activity

→ When To Call Your SEO Team:

1. **After** receiving any Google notifications
2. **Before** major website changes
3. **During** aggressive marketing campaigns

Prevention costs less than recovery.

Regular monitoring helps avoid penalties that could impact your revenue.

Smart link management isn't just about SEO. It's about protecting your revenue.

Client's story: A 30-minute disavow saved them from a 62% traffic drop.

That's \$430,000 saved.
